DETAILED ACTION

Faxing of Responses to Office Actions

In order to reduce pendency and avoid potential delays, TC 3700 is encouraging FAXing of responses to Office Actions directly into the Group at (703)872-9306. This practice may be used for filing papers which require a fee by applicants who authorize charges to a PTO deposit account. Please identify the examiner and art unit at the top of your cover sheet. Papers submitted via FAX into TC 3700 will be promptly forwarded to the examiner.

Allowable Subject Matter

1. Claims 1-30 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter: No prior art of record discloses or suggests a ring binder comprising: a substantially rigid upper structure; a pivotable lower structure; a plurality of ring members; at least one integral securing means or fastener for securing the ring binder to base member for enhanced strength, wherein the

Art Unit:

securing means includes an engagement portion in direct engagement with the upper structure for attaching the securing means to the upper structure, and a plurality of securing elements for securing the ring binder to the base member; at least 75% of the elements extending away from a longitudinal axis of the engagement portion (Claims 1-18); wherein the securing elements have substantially equal length (as stated in Claim 28); and further wherein the securing elements each have a free end located at an end of the securing fastener farthest from the engagement portion; wherein the free ends of the securing elements are substantially coplanar (as claimed in Claim 29); and is free from any intervening sleeve member between the fastener and the upper structure (as stated in Claim 30); and including all of the other limitations from the independent claims.

The Buenger et al is considered the closest prior art to the claims, however, the Buenger et al reference discloses a sleeve member which is in between the engagement portion and the pivotable upper structure. This would make the engagement portion not in direct engagement with the pivotable upper structure, wherein the claims state that the engagement portion is in direct engagement with the upper structure. Therefore, the claims are held to be allowable over the prior art.
